
Call for Papers
Discrete Applied Mathematics

**Special Issue: Ninth Workshop on Graph Classes,
Optimization, and Width Parameters**

We invite submissions to this special issue of *Discrete Applied Mathematics* dedicated to the Ninth Workshop on Graph Classes, Optimization, and Width Parameters, GROW 2019. Submission is also open to researchers who did not attend GROW 2019 and the papers may, but need not, be related to a presentation at the workshop. Contributions arising from papers already published in conference proceedings should be substantially extended and should cite the conference presentation where appropriate.

All articles will be thoroughly refereed according to the high standards of *Discrete Applied Mathematics*.

The full papers must be submitted through the Elsevier Editorial System (<https://www.editorialmanager.com/DAM/default.aspx>). Please see the Author Instructions on the site if you have not yet submitted a paper through this web-based system. Be sure to select the article type, **Special Issue: GROW 2019** so that your paper will be assigned to the guest editors.

The deadline for submission is **July 1, 2020**.

Accepted papers will be published online individually before print publication.

We are looking forward to receiving your contribution.

The Guest Editors,

Robert Ganian, Jan Kratochvíl and Stefan Szeider
