CALL FOR PAPERS

Special issue of *Discrete Applied Mathematics* dedicated to the 65th birthday of Andreas Brandstädt

Guest editors

Feodor Dragan, Kent State University, United States <dragan@cs.kent.edu>
Dieter Kratsch, Université de Lorraine, France <dieter.kratsch@univ-lorraine.fr>
Van Bang Le, University of Rostock, Germany <le@informatik.uni-rostock.de>

Introduction

A special issue of the journal *Discrete Applied Mathematics* will be published on the occasion of the 65th birthday of Prof. Andreas Brandstädt. The scope of the issue will include all aspects of theoretical computer science and discrete mathematics related to the research areas in which Andreas Brandstädt has been involved. These include graph and hypergraph theory, graph algorithms, and combinatorics. Research on the structural and algorithmic properties of special graph classes as well as research related to the work of Andreas Brandstädt will be highly appreciated.

List of topics

Examples of such areas include

- Graph theory
- Graph classes
- Intersection graphs
- Perfect graphs
- Decompositions of graphs
- Hypergraphs
- Graph algorithms
- NP-hard graph problems in special graph classes

Submissions

Authors are invited to submit original papers relevant to the scope of the special issue. All submissions should be uploaded via Elsevier's Online Manuscript Submission, Review and Tracking System for Discrete Applied Mathematics (http://ees.elsevier.com/dam/default.asp) where you can find detailed information and instructions. Please note that once you select 'Submit a Manuscript', you must choose "Special Issue: Andreas Brandstädt" from the drop-down list when prompted for 'Choose Article Type'. All papers will be refereed, and acceptance will follow the standards of Discrete Applied Mathematics.

Deadline for submission

15 April 2014
