# **Homework - Telnet**

1. Read the Telnet material in the notes.

2. Hand in a print-out of a transcript of the following computer session. In case you forgot: you start producing a transcript by typing `script`, and you end it by typing [Ctrl][D] or `exit`.

   - Do a telnet to `iris.rutgers.edu`. This will connect you to the Rutgers Library Information System. If you do not know it yet, you might want to learn more about it as it is a very useful tool for finding books, see whether they are in the library, etc.
   - Once in the IRIS system, try to find the instructions for a new user. (Depending on how your computer is set up, this might involve some hitting of `RETURN` etc.)
   - Look at the overview for a new user.
   - Leave IRIS using END.
