Eighth International Symposium on

Artificial Intelligence and Mathematics

January 4-6, 2004

Fort Lauderdale, Florida
Organizing Committee

General Chair
Martin Golumbic
University of Haifa, Israel

Program Co-Chairs
Fahiem Bacchus
University of Toronto, Canada
Peter van Beek
University of Waterloo, Canada

Conference Chair
Frederick Hoffman
Florida Atlantic University, USA

Publicity Chair
George Katsirelos
University of Toronto, Canada

Program Committee

Franz Baader (TU Dresden, Germany)
Peter Bartlett (UC Berkeley, USA)
Endre Boros (Rutgers, USA)
Adnan Darwiche (UCLA, USA)
Rina Dechter (UC Irvine, USA)
Boi Faltings (EPFL, Switzerland)
Ronen Feldman (Bar-Ilan University, Israel)
John Franco (U. of Cincinnati, USA)
Hector Geffner (UPF, Spain)
Ian Gent (U. of St. Andrews, UK)
Enrico Giunchiglia (U. of Genova, Italy)
Robert Givan (Purdue, USA)
Joerg Hoffmann (Albert-Ludwigs, Germany)
Holger Hoos (UBC, Canada)
Peter Jonsson (U. of Linköping, Sweden)

Henry Kautz (U. of Washington, USA)
Sven Koenig (Georgia Tech, USA)
Richard Korf (UCLA, USA)
Gerhard Lakemeyer (RWTH Aachen, Germany)
Omid Madani (U. of Alberta, Canada)
Heikki Mannila (U. of Helsinki, Finland)
Anil Nerode (Cornell, USA)
Ronald Parr (Duke, USA)
Pascal Poupart (U. of Toronto, Canada)
Jeff Rosenschein (Hebrew University, Israel)
Sam Roweis (U. of Toronto, Canada)
Dale Schuurmans (U. of Alberta, Canada)
Allen Van Gelder (UCSC, USA)
Toby Walsh (4C, Ireland)

Sponsors

The Symposium is partially supported by the Annals of Math and AI and Florida Atlantic University. Additional support is provided by the Caesarea Edmond Benjamin de Rothschild Institute at the University of Haifa and by the Florida-Israel Institute.
## Contents

Production Inference, Nonmonotonicity and Abduction  
*Alexander Bochman*

Spines of Random Constraint Satisfaction Problems: Definition and Impact on Computational Complexity  
*Stefan Boettcher, Gabriel Istrate, and Allon G. Percus*

Interval-Based Multicriteria Decision Making  
*Martine Ceberio and François Modave*

Using Logic Programs to Reason about Infinite Sets  
*Douglas Cenzer, V. Wiktor Marek, and Jeffrey B. Remmel*

The Expressive Rate of Constraints  
*Hubie Chen*

Using the Central Limit Theorem for Belief Network Learning  
*Ian Davidson and Minoo Aminian*

Approximate Probabilistic Constraints and Risk-Sensitive Optimization Criteria in Markov Decision Processes  
*Dmitri A. Dolgov and Edmund H. Durfee*

Generalized Opinion Pooling  
*Ashutosh Garg, T.S. Jayram, Shivakumar Vaithyanathan, and Huaiyu Zhu*

A Framework for Sequential Planning in Multi-Agent Settings  
*Piotr J. Gmytrasiewicz and Prashant Doshi*

Heuristics for a Brokering Set Packing Problem  
*Y. Guo, A. Lim, B. Rodrigues, and Y. Zhu*

Combining Symmetry Breaking with Other Constraints: Lexicographic Ordering with Sums  
*Brahim Hnich, Zeynep Kiziltan, and Toby Walsh*

A Simple Yet Effective Heuristic Framework for Optimization Problems  
*Gaofeng Huang and Andrew Lim*

Biased Minimax Probability Machine for Medical Diagnosis  
*Kaizhu Huang, Haiqin Yang, Irwin King, Michael R. Lyu, and Laiwan Chan*

Combining Cardinal Direction Relations and Relative Orientation Relations in QSR  
*Amar Isli*

Unrestricted vs Restricted Cut in a Tableau Method for Boolean Circuits  
*Matti Järvisalo, Tommi A. Junttila, and Ilkka Niemelä*

Parameter Reusing in Learning Latent Class Models  
*Gytis Karčiauskas, Finn Jensen, and Tomáš Kočka*

New Look-Ahead Schemes for Constraint Satisfaction  
*Kalev Kask, Rina Dechter, and Vibhav Gogate*

Learning via Finitely Many Queries  
*Andrew C. Lee*
Modeling and Reasoning with Star Calculus
Debasis Mitra

Analysis of Greedy Robot-Navigation Methods
Apurva Mugdal, Craig Tovey, and Sven Koenig

Symmetry Breaking in Constraint Satisfaction with Graph-Isomorphism:
Comma-Free Codes
Justin Pearson

Deductive Algorithmic Knowledge
Riccardo Pucella

Inferring Implicit Preferences from Negotiation Actions
Angelo Restificar and Peter Haddawy

Improving Exact Algorithms for MAX-2-SAT
Haiou Shen and Hantao Zhang

Explicit Manifold Representations for Value-Function Approximation in
Reinforcement Learning
William D. Smart

Warped Landscapes and Random Acts of SAT Solving
Dave A. D. Tompkins and Holger H. Hoos

Using Automatic Case Splits and Efficient CNF Translation to Guide a SAT-Solver When
Formally Verifying Out-of-Order Processors
Miroslav N. Velev

Multi-Agent Dialogue Protocols
Christopher D. Walton

Bayesian Model Averaging Across Model Spaces via Compact Encoding
Ke Yin and Ian Davidson

Crane Scheduling with Spatial Constraints: Mathematical Model and Solving
Approaches
Yi Zhu and Andrew Lim

Papers from the Special Session on Intelligent Text Processing
Organizer: Shlomo Argamon, Illinois Institute of Technology, USA

Effective Use of Phrases in Language Modeling to Improve Information Retrieval
Maojin Jiang, Eric Jenson, Steve Beitzel, and Shlomo Argamon

Text Categorization for Authorship Verification
Moshe Koppel, Jonathan Schler, and Dror Mughaz

Mapping Dependencies Trees: An Application to Question Answering
Vasin Punyakanok, Dan Roth, and Wen-tau Yih

A Linear Programming Formulation for Global Inference in Natural Language Tasks
Dan Roth and Wen-tau Yih
